**Replacing & Integrating
Legacy Asset
Management Systems
with IBM Maximo**

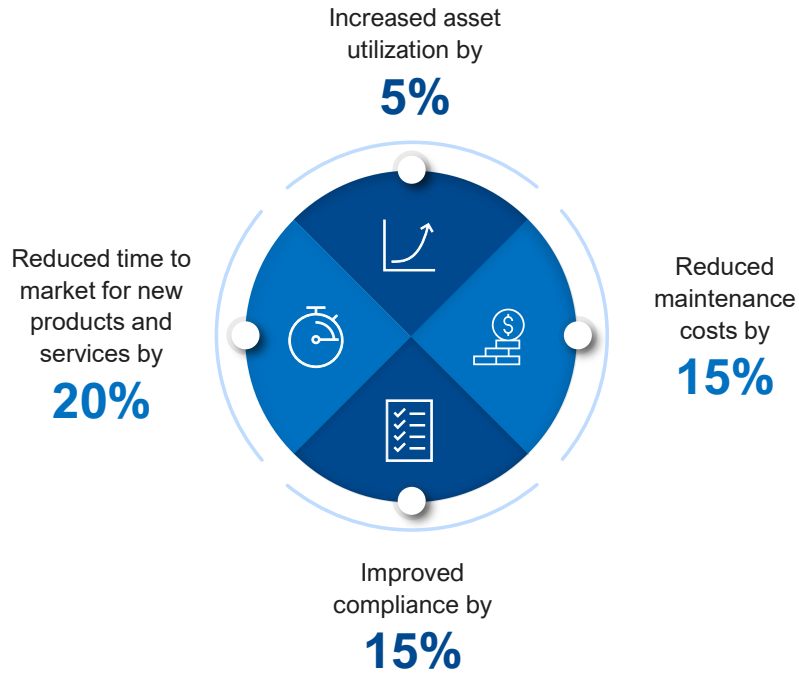

Entergy, a major energy provider, needed to replace its legacy asset management system with a more modern and efficient solution. Entergy was having issues with the process configuration of workflows and sought out a team that could help by integrating multiple systems into one modernized system of record to better track end to end operations from procurement to asset tracking to end sale of nuclear power units.

They chose IBM Maximo and partnered with RTS to staff the project with skilled resources via Accenture.

RTS was able to staff the Entergy project quickly and efficiently with skilled resources in 48 – 72 hours per request. These roles included integration developers, technical writers, and organizational change management consultants. RTS has a large pool of experienced professionals, and they can quickly identify and place the right people on projects.

By Moving to Maximo, Entergy can expect the following efficiencies

RTS has a less than 5% attrition rate. This is due to their company culture, dedication to upskilling and investing in resources, employing a large pool of experienced professionals and their efficient staffing process. RTS's ability to staff projects with skilled resources was a key factor in the success of the Entergy project. RTS's team of experienced professionals was able to implement IBM Maximo quickly and efficiently, resulting in several benefits for Entergy.
